1. Overview

You can embed a Barista widget on any portal or web page. This widget allows you to launch a Barista chat window by simply clicking on the Barista icon and restarting a conversation by clicking the **Restart** button. To hide the Barista widget, click on the **X** button.

We currently are required to safelist domains where the embedded script is going to be hosted. We already have **servicenow.com** and **jira.com**. For other domains, please inform your Customer Success representative, so we can add them to our safelist.

2. Sample Code

In this section, you will find the sample code to add the Barista widget and a table with a description of the values. When you embed this script on your webpage, it will load all the Barista chat components, including the avatar image, and load all Barista chat behavior.

2.1 Steps to Use Barista Widget Script

1. Copy the sample code below.

```

1 <script
2   data-color="#0082C8"
3   data-position="bottom left"
4   src="https://{tenant}.espressive.com/embed/index.js"
5 >
6 </script>
```

2. Replace the `data-color` value with the color code you want the Barista icon to be.
3. Replace the `data-position` value with the position where you want the Barista chat to appear on the page.
4. Replace the `src` value with your tenant URL.

For example: `https://myawesometenant.espressive.com/embed/index.js`

2.2 Script Elements

Element	Value	Description
<code>data-color</code>	<code>#0082C8</code>	This establishes the color of the Barista icon.
<code>data-position</code>	<code>top left</code> <code>top right</code> <code>bottom left</code> <code>bottom right</code> <code>bottom</code> <code>right</code>	This indicates the locations of the Barista widget on the webpage.
<code>src</code>	<code>https://{tenant}.espressive.com/embed/index.js</code>	This is the tenant's URL. Replace the placeholder with your tenant's name.
